OBJECTIVE

I'm currently looking for full-time Python-Django developer, Software developer opportunities! Seeking a challenging position in a technical organization that fully utilizes my skills and provides me with suitable opportunities to grow my technical and communication skills which would help me as a fresher to grow while working towards the organizational goals.

EDUCATION

● Pursuing Full Stack Web Development Course from IT Vedant

- -

● Mumbai university/Sinhgad college of com

major: B com

2019 - 2021

- - SGPI:7.50

● Maharashtra Board/ Eden Jr college of com

major: Hsc

2017 - 2018

- - Percentage:71%

PROJECTS

● Django Blogging Application

-

In this project, I build a Blog application with Django that allows users create, edit, and delete posts.. The homepage will list all blog posts, and there will be a dedicated detail page for each individual post. It contains a login system so he/she needs to log in to this project.

● Bank management system

-

It contains all the basic functions which include creating a new account, view account holders record, withdraws and deposit amount, balance inquiry, closing an account and edit account details. In this mini project, there is no such login system. This means he/she can use all those available features easily without any restriction. It is too easy to use, he/she can check the total bank account records easily.

● Local Community Application

-

In this app people can post their services, queries. The user can select the service and the user would get the details of the service and it should be notified to the service provider. For the query section, only registered users

would be allowed to post the queries and the answers would only be given by the registered members. All the queries posted by the members can be viewed by the admin, and the admin can take action of deleting that post if any unwanted content is present
