#### Courses

- HSC

## PROJECTS :

### Local Community Application

- In this app people can post their services, queries. The user can select the service and the user would get the details of the service and it should be notified to the service provider. For the query section, only registered users would be allowed to post the queries and the answers would only be given by the registered members. All the queries posted by the members can be viewed by the admin, and the admin can take action of deleting that post if any unwanted content is present.

### Django Blogging Application

- In this project, I build a Blog application with Django that allows users create, edit, and delete posts. The homepage will list all blog posts, and there will be a dedicated detail page for each individual post. It contains a login system so he/she need to login in this project.

### Todo Application

- In this project user can easily add their day to day task to be done. There should be another page where all the tasks which are added by the user should be listed. The most recent one should be at the first. On each and every task list the user should have the option of changing the status of their task. The default task status should be incomplete. The user should also have the option of deleting their task.

## TECHNICAL SKILLS :

Python
